The Once Only Principle

Transparent Citizen by Default?

Once-only under the light of the GDPR

1

GDPR principles and challenges

Main data protection challenges for the OOP

- Legitimacy
    - Legal basis for the system
    - Legal basis for each application – law/consent?
- Purpose limitation: OOP implies re-use for a new purpose
- Integrity and confidentiality:
    - Who gets the data?
    - How do you control for abuses?

Choices in the SDGR – opinion of the EDPS

- (Version of 28 November 2017)
- Closed list of application areas
- Explicit request (complying to GDPR), *except* if exchange is permissible under EU or national law
- Preview possibility before transfer, *except* if no preview is permissible under EU or national law
- Limited to what has been requested, and only used by the receiving authority for the purpose of the procedure for which the evidence was exchanged.

TOOP approach

- Privacy by Design – alignment to SDGR
- (Except for one use case)
- Data protection impact assessments, on a per-use-case basis
- No centralised storage of payload
- Clarifying legal terms and privacy policies in TOOP
